The following are new features for the PCS200 Communicator Module. They may not be included in any manuals, therefore use this information in conjunction with your existing PCS200 documentation.

New GSM Support

The PCS200 Communicator Module now supports GSM reporting through a GSM network to a landline monitoring receiver. With this added support the PCS200 can now:

- Send pre-recorded voice messages to a maximum of 8 phone numbers to report alarms using the Paradox Plug-In Voice module (VDMP3)

Note: The VDMP3 must be mounted directly onto the PCS200 Communicator Module.

- End user can arm/disarm the system by sending a text message (SMS) to the PCS200
